MACK

M.A.C. Model 04 / Mobile Autonomous Computer

A personal AI companion in a familiar little Mac body.

DONOR CLOCK / CATALOG [1]

80 x 91 x 112 mm

229 g complete clock; robot mass TBD

AI-generated appearance concepts. The physical robot and dock have not been built.

Talk

Local conversation and an approved voice.

Remember

Saved facts, history and familiar personality.

See + express

Classic desktop face; hidden camera planned.

Move

4 legs / 12 axes proposed; self-righting is a goal.

FROM SOFTWARE TO A PHYSICAL COMPANION

1. **WORKING ON THE DEVELOPMENT MAC**

   Classic desktop, local AI, spoken interaction and durable memory.

2. **ENGINEERING THE BODY**

   Fit joints, onboard compute, vision and power. Plan local control for movement and stopping.

3. **NEXT: PROVE ONE COMPLETE LEG**

   Resolve knee-motor placement, bearings and cables. Test under load before building the four-leg base.

PLANNED HOME DOCK

Lithium-ion power. Return, align and recharge autonomously. **Concept; controls still to build.**

LONG-TERM DIRECTION

Carry the same identity and memories into a future humanoid body, years from now.

Build record: github.com/Bill-Viking/mack-model-04
